

Using the portfolio maps

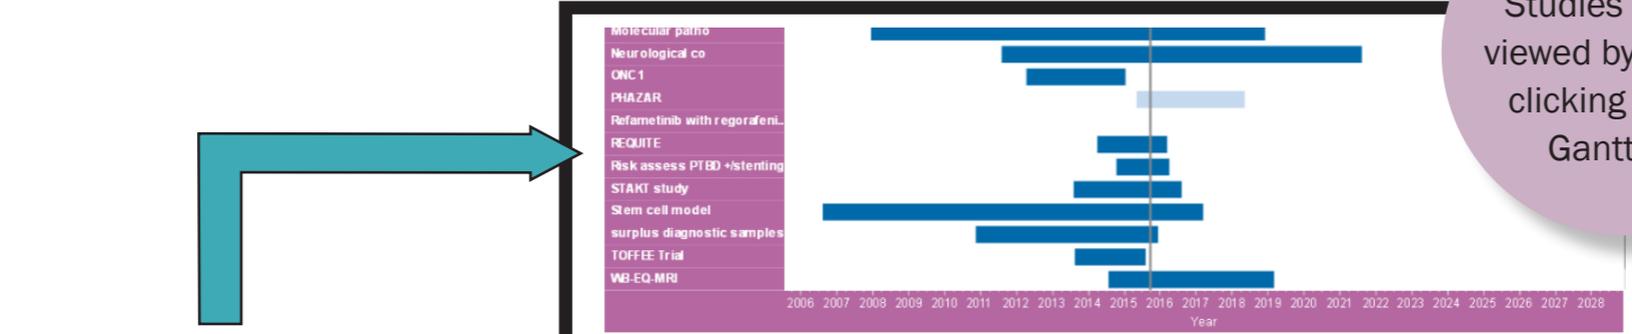

1

Access the portfolio maps on the NCRI CSG website. From the drop-down menu, choose your CSG map and sub-topic of interest

<http://csg.ncri.org.uk/portfolio-maps>

2

Each map groups the studies by treatment modality and shows if the study is preparing to open for recruitment (in setup), actively recruiting (open) and whether studies are open on multiple portfolios. Study searches may be tailored by active status, funding type, phase and CSG involvement by selecting filters. For further information click on your study of interest.

4

Studies can be viewed by date by clicking on the Gantt tab

Study 1
 A phase III study looking at radiotherapy and chemotherapy of non-metastatic cancer

UKCRN ID 12345

Speciality
 Portfolio eligibility

Study Type	Interventional	Status	Open
Design Type	Treatment	Closure date	31/01/2020
Disease	Cancer	Sample size	1000
Phase	III	Recruitment to date	

Lead Country England

Main Inclusion Criteria	Main Exclusion Criteria
1. Non-metastatic disease 2. No previous treatment	1. Age <16 years 2. Metastatic disease 3. Previously treated

Chief Investigator(s) Mr John Smith

Funder(s) Sponsor(s) Charity UK

3

Clicking on a study takes you through to detailed study information, including a study synopsis, inclusion and exclusion criteria and percentage recruitment

NCRI Clinical Studies Groups portfolio maps

Further information

The NCRI Clinical Studies Groups (CSGs) portfolio maps are a visual tool providing an overview of the NCRI CSGs' portfolio of clinical studies, highlighting current research activity and identifying potential areas for future research.

The NCRI CSGs, both 'tumour-specific' and 'cross-cutting', use the portfolio maps to visualise research activity across the NIHR Clinical Research Network portfolio of cancer studies and those added by the devolved nations.

Other members of the research community look to the maps for information, including research network managers, research nurses, clinicians and patients.

For further information, please contact the NCRI CSGs research project officers at portfolio.maps@ncri.org.uk

Study information

Additional detail and filters on the maps further enrich the depth of information that they convey. These highlight:

- how a study has been funded and sponsored – these categories can be Academic, Industry or a Partnership;
- how a study has been developed - directly by a CSG, consulted on by a CSG, or 'Other';
- study phase – what phase of research a study is in.
